FOREWARD

Central Statistical Organization has published and disseminated Myanmar Agricultural Statistics annually since 2017. The agriculture sector contributes about 22 percent of gross domestic product (GDP) of Myanmar, over 29 percent of total export earnings, and nearly half of employees rely on crop production, livestock breeding, fishing and agro-forestry. The purpose of this publication is to provide detailed statistical information on Myanmar Agricultural Sector for the period between 2014-2015 and 2022-2023.

The present publication offers detailed information on Population, Weather and Land, Inputs, Production, Prices and Share of Agriculture, Livestock and Forestry in GDP, Households and Social Issues by State and Region, Export and Import of Agriculture, Livestock and Forestry Products and Food Balance Sheet with the systematic elaborations of seven different sections. Myanmar Agricultural Statistics is made available for free access through the Myanmar Statistical Information Service (MMSIS) (www.mmsis.gov.mm) and the CSO website (www.csostat.gov.mm).

We express our sincere appreciation to the Ministry of Agriculture, Livestock and Irrigation and the Ministry of Natural Resources and Environmental Conservation for their collaboration on this publication.

Note: Described Service Providing Farm Machinery by Agriculture Mechanization Stations (A.M.S) under the Government Sector.

Source : Agricultural Mechanization Department.

(1) The AMD provides the Wheel Tractors for land preparation including the old tractors up to 2017-2018(April-March).

(2) The Farm Machinery for service providing of land preparation with Tractors, transplanting with Transplanters and harvesting with Combine Harvesters are listed in 2018 (Apr-Sept).

Responsible Unit (Service or Structure)	Central Statistical Organization
Level of Disaggregation	Union
Coverage	Most crop and livestock products under agricultural activity which are significant for Myanmar food production
Study Variables	Calorie per capita per day; Protein per capita per day; Fat per capita per day
Classification Variables	FAO commodity list
Type of Dissemination	Publication(Book)
Frequency of	Yearly
Frequency of Data Collection	Yearly
Statistical Units	<p>For Production of Crops, Livestock and Fishery: Agricultural holdings.</p> <p>For Trade: All Crops and Livestock products traded which were sourced from Customs Department.</p>
Data Description	<p>Food Balance Sheet presents a comprehensive picture of the pattern of a Myanmar's food supply in the current year. Our food balance sheet shows for each food item which reflects primary commodity, the sources of supply and its utilization. The total quantity of foodstuffs produced in Myanmar was added to the total quantity imported which gives the supply available during that period. On the utilization side, we can distinguish between the quantities exported, feed to livestock, used for seed, put to manufacture for food use and non-food uses, losses during storage and transportation, and food supplies available for human consumption. The per capita supply of each such food item available for human consumption is then obtained by dividing the respective quantity by the related data on the population during that period. Data on per capita food supplies are expressed in terms of quantity and (by applying appropriate food composition factors for all primary and derived processed products) also in terms of caloric value and protein and fat content.</p>

METHODOLOGY SHEET | Food Balance Sheet

Statistical Concepts and Definitions	Myanmar Food Balance Sheets(FBS) are started compiling from 2011 to 2016 for the first time in 2017, mainly with country - level data on the production and trade of food commodities. Using these data and the available information on seed rates, waste rates , estimated stock changes and types of utilization (Seed, Feed, Food, Processing and Other Utilization), a supply/utilization account was prepared for each commodity in weight terms. The food component of the commodity account, which is usually derived as a balancing item, refers to the total amount of the commodity available for human consumption during the year. Besides commodity-by-commodity information, the MM FBS also provide total food availability estimates by aggregating the food component of all available commodities including fishery products. From these values and the available population estimates, the per person dietary energy and protein and fat supplies are derived and expressed on a daily basis. In the FBS production data refer only to primary products while data for all other elements also including processed products derived there from, expressed in primary commodity equivalent.
Time Coverage	2018-2022
Unit of Measure	Domestic Supply Quantity (Production, Import, Stock Change, Export), Domestic Utilization Quantity (Feed, Seed, Processed, Waste, Other Utli), Food are expressed in [‘000 MT].Food Supply Quantity [kg/capita/year], Calories Supply Quantity [kg/capita/day],Protein Supply Quantity and Fat Supply Quantity are expressed in [g/capita/day] ,Total Population is expressed both sexes in [‘000].
Institutional Mandate	Statistical Law (2018), Statistical Regulation(2021)
Documentation on Methodology	FAO FBS Guidebook and Word Nutrition Standards
Source Data	The main source is official statistics from the Department of Agricultural Land Management and Statistics, Department of Fisheries, Livestock Breeding and Veterinary Department and Central Statistical Organization.
